

Water bottle holder Instructions:

1. Cut two 9" pieces of colorful duct tape. Overlap about 3 inch width on a piece of parchment paper. This will be the outside of the water bottle holder.
2. Repeat to make 9" x 3" piece of regular duct tape for inside of the holder (which no one will see).

3. Place a 4" long strip of duct tape on a piece of parchment paper. Use a 1½ inch circle punch to punch out two circles, one for the inside and one for the outside.

4. Cut an 8" long piece of duct tape. Fold lengthwise sticky sides together to 8" long & half its width.

5. Cut a 45" long piece of duct tape. Fold like step #4 into a long and skinny shoulder strap.

6. Flip over the 9" x 3" colorful strip from step #1, sticky side up. Take the long strap from step #5 and create an oval as shown in the picture.

7. Take the short strap in step #4 and place it in a “U” shape in between the big oval strap as shown in the picture. The more evenly spaced you make these 4 the more balanced your water bottle will be. You will also want the “U’s” where they cross under the water bottle to be level to ensure the water bottle sits on both straps.

8. Take the 9” x 3” plain strip from step #2 and place it on top of the piece from step #1 to hold the straps in place. You may need help from an adult to make sure this is not crooked.

9. Place a water bottle inside the holder and flip it over. Cross the bottom straps and stick on the bottom circle to hold them in place.

10. Remove the water bottle and place the second circle inside the holder lined up on top of the first circle to hold the straps in place

11. Place a water bottle inside the holder and close it up with an additional 3” piece of duct tape. This piece is able to reposition, if needed, to allow the water bottle to go in and out. Make it tight enough that it won't fall out but not too tight that you cannot get it out when needed.
